

## Post-Industrial Recycled Content of Wilsonart Commercial Flooring

Wilsonart Commercial Flooring is comprised of 1/4 inch high density fiberboard sandwiched between two layers of Wilsonart Laminate. The wood particles that are employed in the high density fiberboard are obtained from several sources; 1) waste sawdust from saw mills, 2) waste wood chips from log processing, and 3) waste planar shavings from wood processing, to name a few. In all cases, the wood particles that are used have been salvaged from a waste stream and are considered to be post-industrial recycled. The total recycled content of each type of Wilsonart Commercial Flooring is given below:

	Wilsonart Contact Flooring	56% recycled content by weight
	Wilsonart Red Label Flooring	56% recycled content by weight
	Wilsonart Estate Plus Flooring	56% recycled content by weight
	Wilsonart Classic Flooring	65% recycled content by weight
